

QR Codes

Make a code. Save it. Put it where people can scan it.

We will create a QR code called Friday Coffee RSVP, save it in the library, view the code and download its PNG. The code name helps you find it; the destination is what a person opens when they scan.

Before you start

- QR Codes is free. You do not need to buy Image Maker or another service to create and download codes.
- Have the complete working web address you want people to open. Copy it from your website, menu, event or registration page. The example.com address in these pictures is sample text.
- Sign in to the Bruno account where you want to keep the code.

Screenshots use a fictional Atelier Demo account and example data. The interface is Bruno's actual interface. Requests, setup and saves were demonstrated without changing a real account or contacting a provider.

Find your saved codes

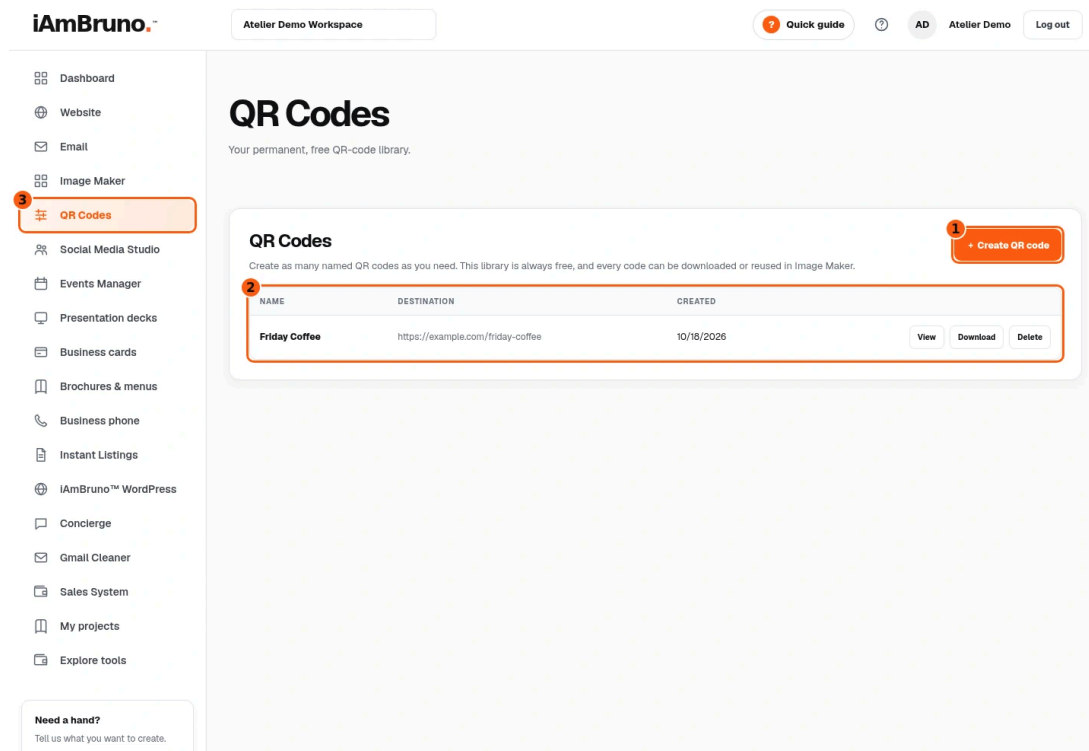

Check the newly saved row

Download the PNG and use it

Name the code and paste the destination

View the code and try a scan

Find your saved codes

Atelier Demo - Example account and simulated responses.

- 1 Start a new code.
- 2 Your saved code library.
- 3 QR Codes is a separate free tool.

Choose QR Codes from the main menu. On a phone, open Menu first.

This is your QR library. A saved row shows its name, destination and creation date, followed by View, Download and Delete.

Choose Create QR code to add one. Opening this form does not save a code yet.

WHAT HAPPENS NEXT

The small Create a QR code form opens, ready for the name and destination.

Name the code and paste the destination

Create a QR code

x

Name it so you can find it later, then enter the link or text it should contain.

Name

1

Friday Coffee RSVP

Link or text

2

<https://example.com/friday-coffee>

3

Save QR code

Atelier Demo - Example account and simulated responses.

- 1 Name: a label you will recognize.
- 2 Destination: the link or text the code encodes.
- 3 Save the code to this account's library.

In Name, type a label you will recognize later. We use Friday Coffee RSVP. The label is for your library; it is not the page people will see.

In Link or text, paste the complete destination. For your own code, use your real working link. Check <https://>, spelling and the full page address. You can also encode text instead of a web link.

Choose Save QR code when both fields are right. Closing the form without saving leaves the library unchanged.

WHAT HAPPENS NEXT

The form closes after a successful save, and the new named code appears in the library.

Check the newly saved row

The screenshot shows the iAmBruno web application interface. The top navigation bar includes the iAmBruno logo, a workspace selector set to 'Atelier Demo Workspace', and user controls for 'Quick guide', 'AD', 'Atelier Demo', and 'Log out'. A left sidebar lists various tools, with 'QR Codes' highlighted in orange. The main content area is titled 'QR Codes' and contains a sub-header 'Your permanent, free QR-code library.' Below this is a 'QR Codes' panel with a '+ Create QR code' button and a table. The table has columns for 'NAME', 'DESTINATION', and 'CREATED'. It contains two rows: 'Friday Coffee' and 'Friday Coffee RSVP', both with the destination 'https://example.com/friday-coffee' and the creation date '10/18/2026'. Each row has 'View', 'Download', and 'Delete' buttons. A red circle with the number '1' and an arrow points to the first row, 'Friday Coffee'.

NAME	DESTINATION	CREATED	
Friday Coffee	https://example.com/friday-coffee	10/18/2026	View Download Delete
Friday Coffee RSVP	https://example.com/friday-coffee	10/18/2026	View Download Delete

Atelier Demo - Example account and simulated responses.

- 1 The library now includes the new row and its destination.

Find Friday Coffee RSVP in the library. The earlier code is still present: saving a new code adds a row.

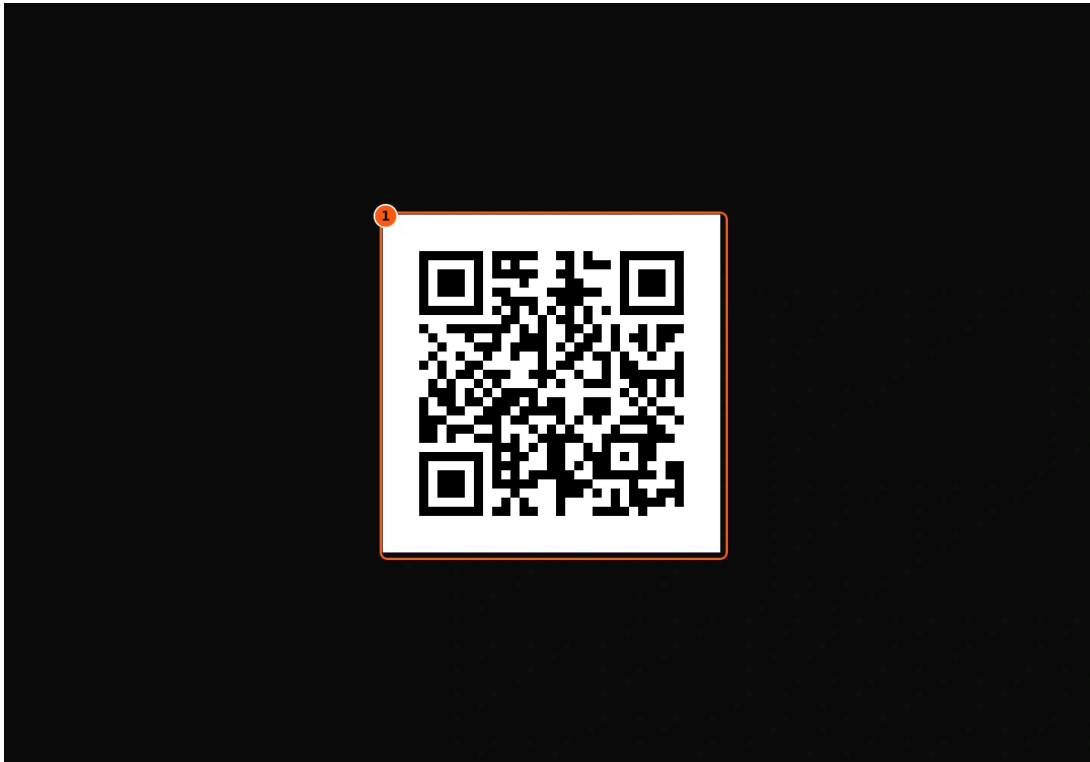

Read the destination in this exact row before downloading. Two codes can have similar names, so the name alone is not enough.

View opens a readable picture of this code in a separate tab. Use Download when you want its PNG file.

WHAT HAPPENS NEXT

You have a persistent saved entry and can reopen or download this specific code later.

View the code and try a scan

Atelier Demo · Example account and simulated responses.

- 1 This is the actual QR image for the sample destination.

Choose View in the correct saved row. The QR picture opens in another browser tab.

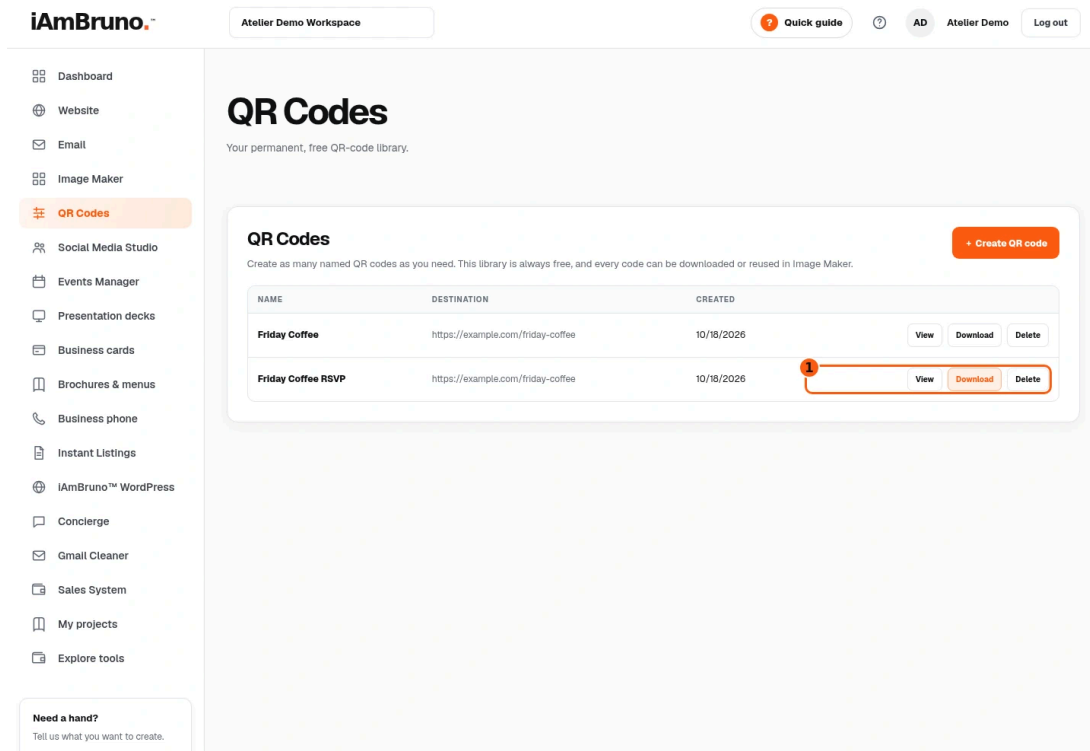

Use your phone's camera or QR scanner. Check the actual destination it offers, then make sure the intended page opens.

If the destination is wrong, create a corrected code before printing or sharing. A static QR encodes the destination you saved; changing its library name or other website text does not silently rewrite that encoded address.

WHAT HAPPENS NEXT

You have checked the encoded destination, rather than judging the code only by how it looks.

Download the PNG and use it

Atelier Demo · Example account and simulated responses.

- 1 Download belongs to the selected saved row.

Return to the library tab. Choose Download in the Friday Coffee RSVP row. Your browser downloads that code as a PNG image.

Use the PNG on your flyer, menu, ticket or website. Keep a clear margin around it and do not stretch it out of proportion. Test the final printed or published version, not only the original PNG.

For an Image Maker design, choose Add QR code in that tool and select this saved entry by its name and destination. Scan the finished design again.

Delete removes a library entry after confirmation. It does not delete the destination website. If you replace a code with a new destination, update the artwork wherever the old PNG was used.

WHAT HAPPENS NEXT

You have the PNG and a saved library entry. You can download it again without buying or regenerating an image.

Come back whenever you need it.

The short QR tour points to Create, the form and your library. This manual explains the complete create, check and download task.

In your dashboard, choose **Quick guide → Show me around** to replay the short tour. Use **Read the guide** or **Download PDF** for these complete instructions.
