

Your website

Check the site. Make one change. Save deliberately.

Your Website page opens the selected site and the editing tools available for its plan. We will change a headline in the native editor, save it, try the optional image controls and show the separate full-redesign workflow. A connected WordPress site uses a different secure editor link.

Before you start

- Check the website and domain before editing. The native SubDomain editor and the connected WordPress editor are different branches; follow the controls your account actually shows.
- Bruno can write and design a full replacement from your completed Website Preview or Social Media intake. Manual text, color and layout edits are optional alternatives for specific changes.
- Save website changes the saved website. Recreate selected image generates a picture and immediately saves the whole current page, including other unsaved edits. Run full redesign replaces the selected site's full design; it is not a draft-only preview button.

These screenshots show the actual Bruno interface with fictional Atelier Demo details and simulated responses. Requests, saves and results are examples, not real customer records or live provider actions.

Check the selected site before opening an editor

Make one specific text correction

Optionally move a selected element

Check the image and automatic save message

Choose the right AI editing path

Native branch: open the actual editor

Wait for Website saved

Optionally adjust or recreate one image

Check the public result after editing

Review the full-redesign request before running it

Let the saved redesign continue

Review the finished full design

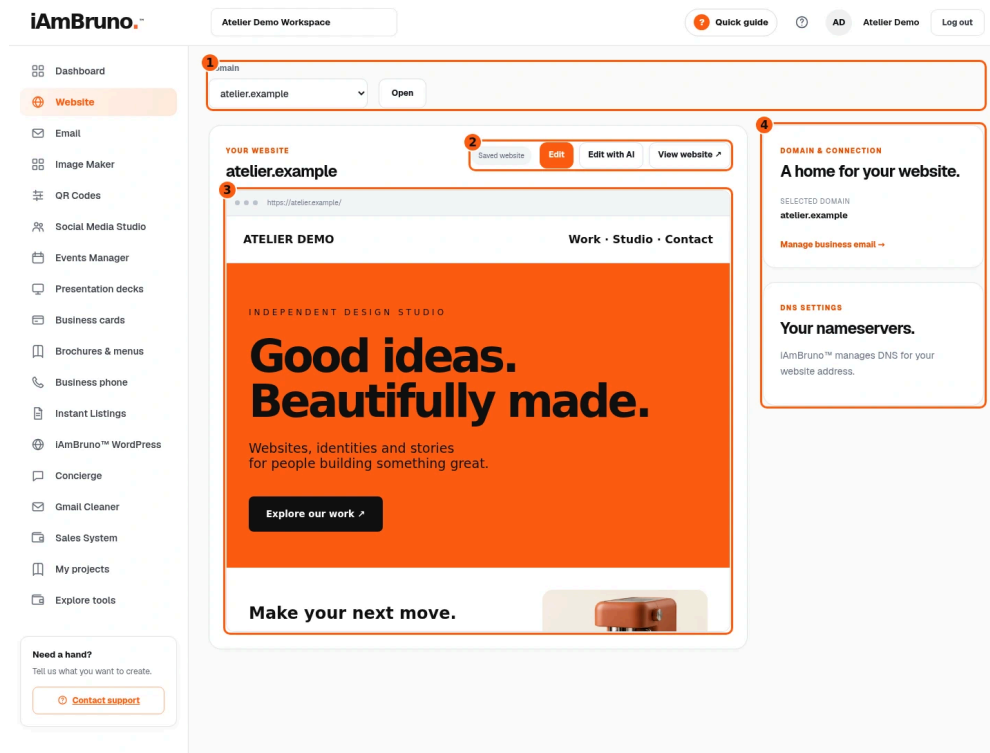

Connected WordPress uses a secure edit link

Open the confirmed redesigned site

Complete the intake when redesign is blocked

Start from setup when no website is linked

Check the selected site before opening an editor

Atelier Demo - Example account and simulated responses.

- 1 The current domain selection.
- 2 View, Edit and AI actions for this branch.
- 3 The selected site's preview.
- 4 Domain, connection and email information.

Choose Website in the main menu. Confirm the selected domain and the site preview. If several sites are available, use the selectors to choose the intended one.

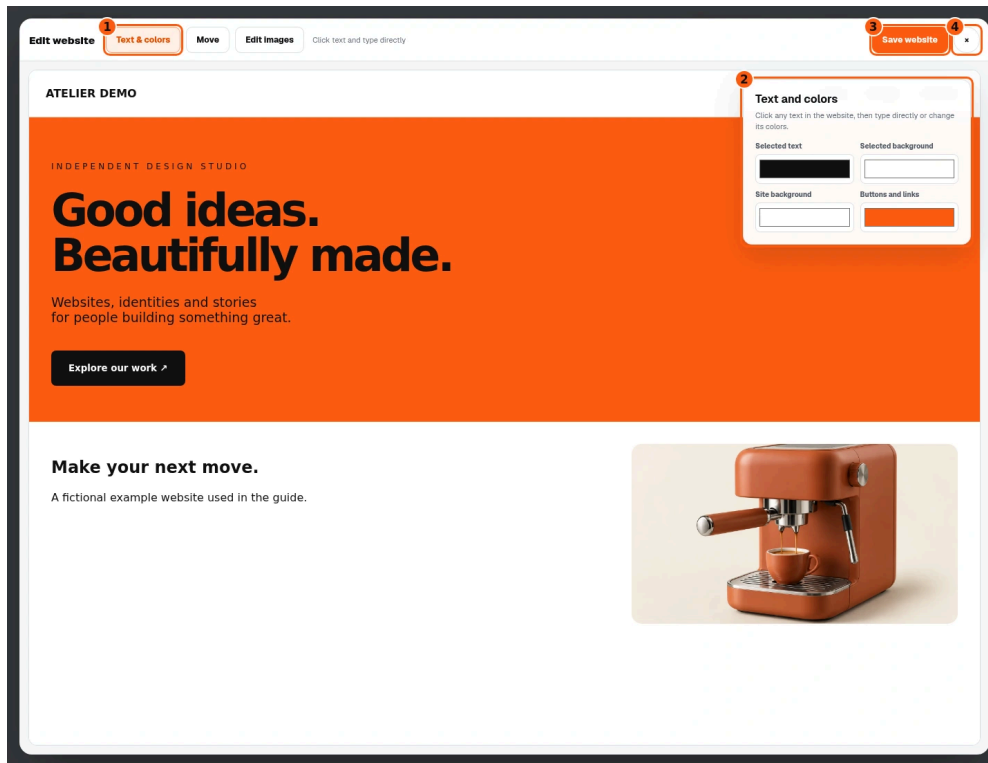

View website opens the public site. Edit opens the editor available for this plan. Edit with AI offers separate redesign and chat choices.

Domain & connection identifies the selected address. Nameserver details depend on the connected domain; do not change your domain provider just to follow this editing example.

WHAT HAPPENS NEXT

You can inspect the right site and choose the editing workflow that matches its plan.

Native branch: open the actual editor

Atelier Demo - Example account and simulated responses.

- 1 Text & colors is the current mode.
- 2 Color controls for the selected text and site.
- 3 Save stores this website.
- 4 Close returns to the Website page.

For a native Bruno SubDomain site, choose Edit. The website opens in the editor with Text & colors, Move and Edit images tools.

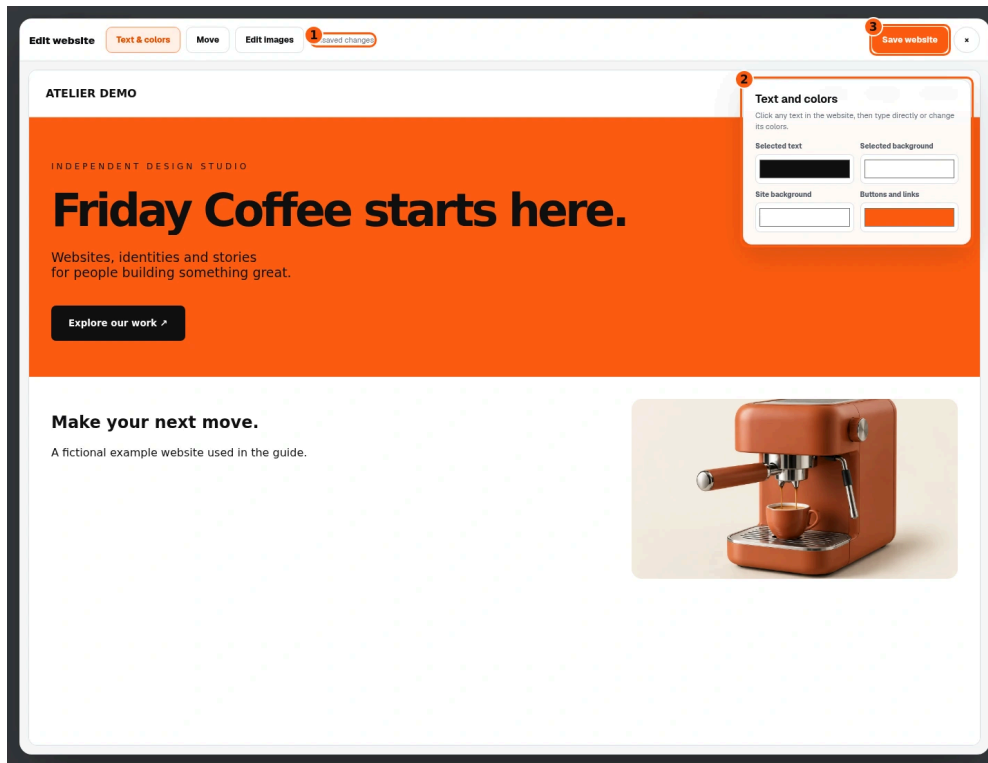

Text & colors lets you click text in the page and type directly. The right panel changes selected text, selected background, site background or buttons and links.

Save website is deliberate. The close button leaves the editor; if there are unsaved changes, read the confirmation before discarding them.

WHAT HAPPENS NEXT

The current page is editable without asking for a new full design.

Make one specific text correction

Atelier Demo - Example account and simulated responses.

- 1 The actual unsaved-change status.
- 2 Optional selected-text and color controls.
- 3 Save the checked correction.

Click the main headline in the page and type the new words. Our optional manual edit changes it to Friday Coffee starts here.

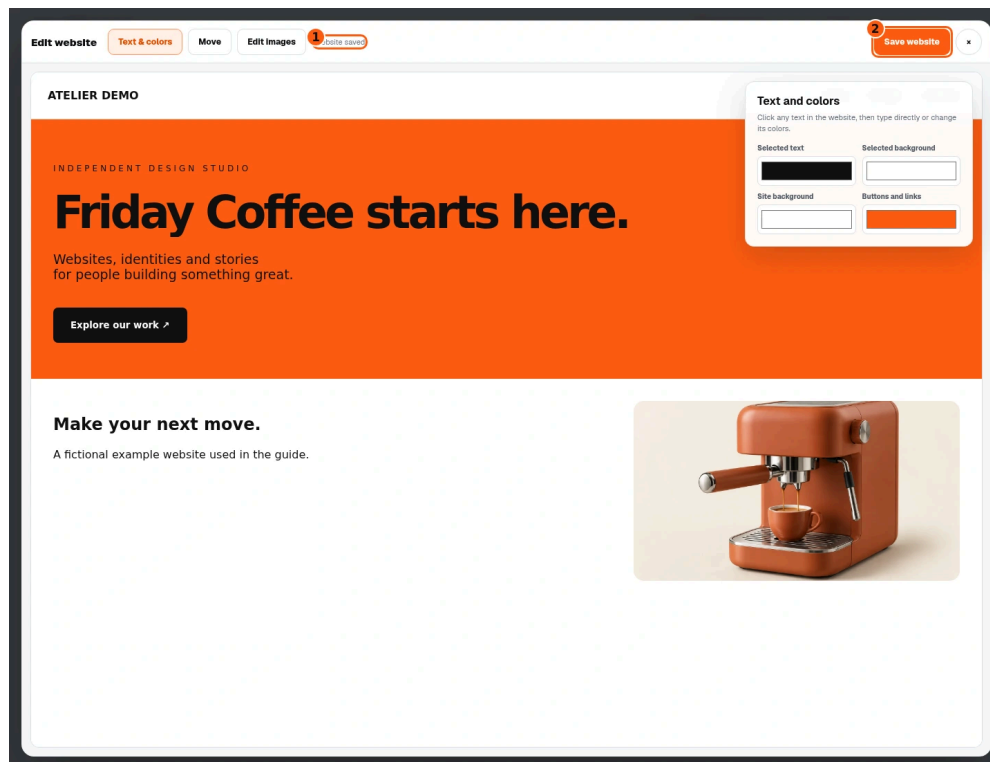

Unsaved changes means the new text is visible in the editor but is not yet saved. Check the spelling and line breaks.

You can adjust a selected text color in the side panel. Choose Save website when the intended change is ready.

WHAT HAPPENS NEXT

Saving submits the current edited page; typing alone is not a save confirmation.

Wait for Website saved

Atelier Demo - Example account and simulated responses.

1 The explicit successful-save status.

2 Save remains available for later changes.

Wait for Website saved in the editor toolbar. An error message is not a successful save.

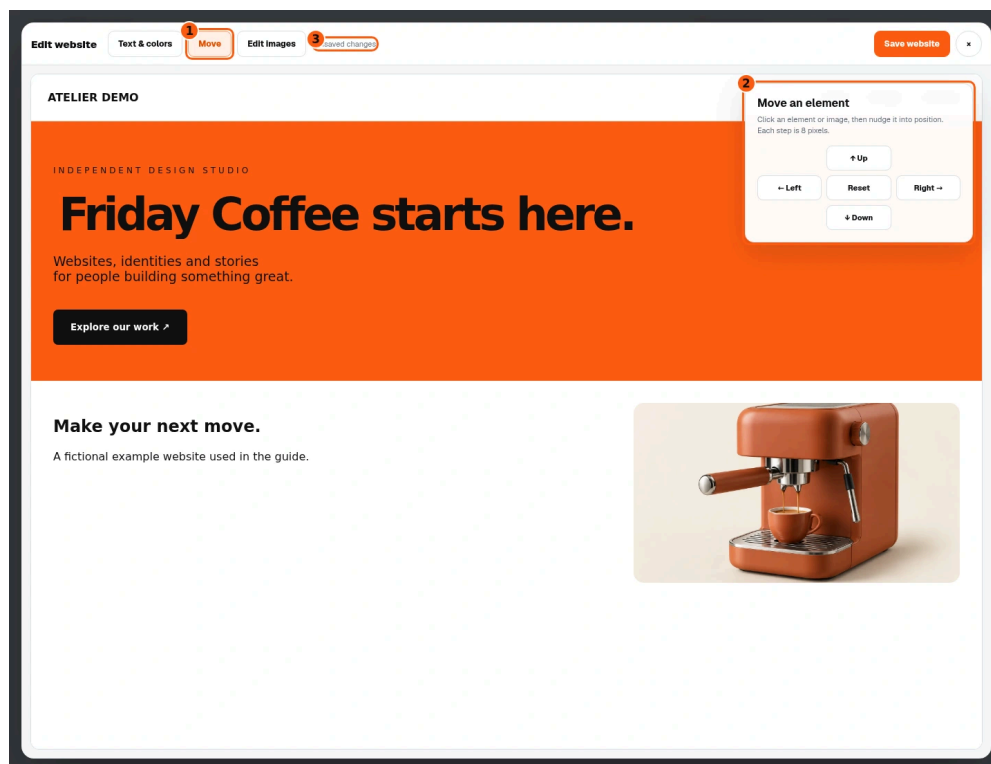

Inspect the headline again. The example's save request stores the edited HTML through the actual frontend handler, with its backend response simulated.

You can continue editing or close the editor. Open View website afterward to check the saved result outside editing mode.

WHAT HAPPENS NEXT

The saved page includes the corrected headline.

Optionally move a selected element

Atelier Demo - Example account and simulated responses.

- 1 Switch to Move mode.
- 2 Nudge or reset the selected element.
- 3 The status tells you that the page needs saving.

Choose Move, then click the element in the page. We select the headline and try one Right step. Each step moves eight pixels.

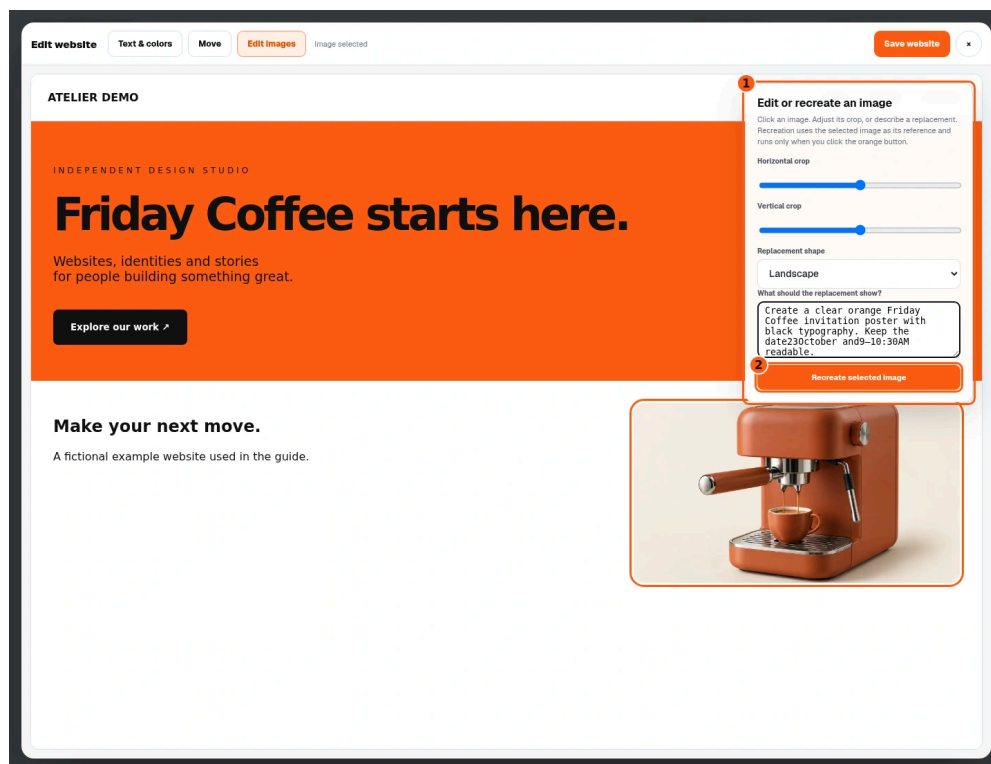

Use Reset to remove this element's move adjustment. This example resets the trial move before saving, keeping the original layout.

Check desktop and phone layouts after intentional positioning changes. Save website stores the result; the orange selection outline belongs to the editor, not the finished site.

WHAT HAPPENS NEXT

You can adjust one element deliberately without starting a full redesign.

Optionally adjust or recreate one image

Atelier Demo - Example account and simulated responses.

- 1 Controls for the actually selected image.
- 2 This explicit action recreates one image and saves the website.

Choose Edit images and click a picture on the page. Crop sliders adjust its position; choose a replacement shape when requesting a new image.

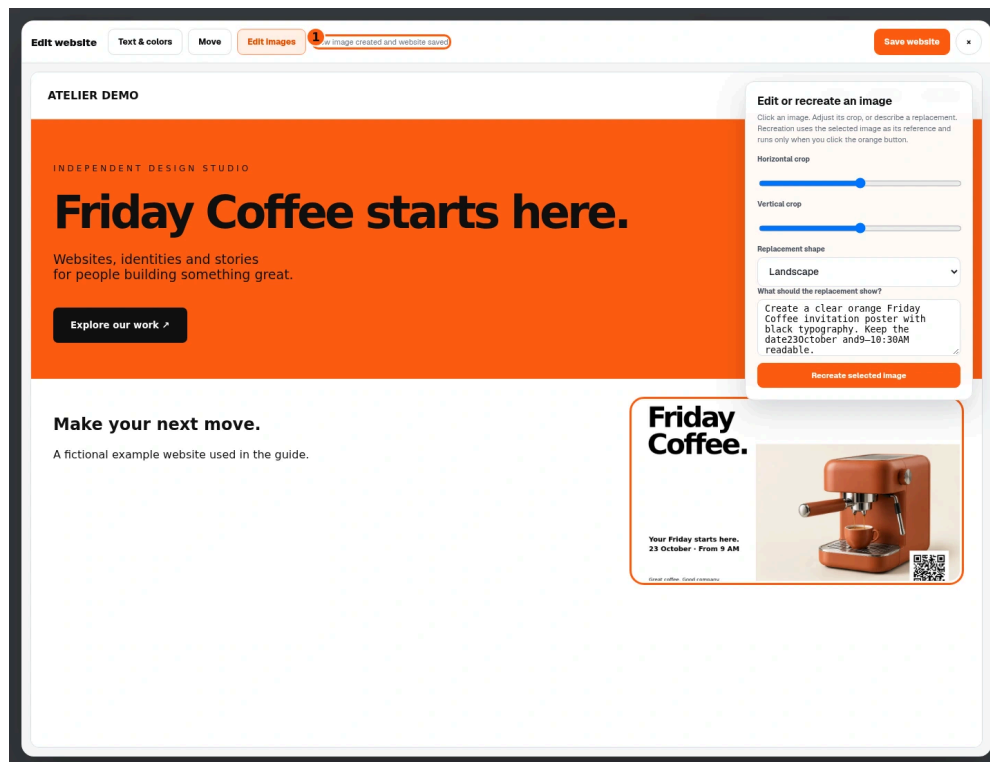

To recreate the selected picture, describe the intended replacement. Our example asks for an orange Friday Coffee invitation poster with the confirmed event facts. Existing reference and result artwork are illustrative fixtures.

Recreate selected image generates the replacement and saves the whole current page on success, including other unsaved text, crop and layout edits. Check those changes before clicking.

WHAT HAPPENS NEXT

A successful request replaces the selected image and reports that the website was saved.

Check the image and automatic save message

Atelier Demo - Example account and simulated responses.

- 1 The combined image-created and website-saved confirmation.

Wait for New image created and website saved. Inspect the replacement for readability, correctness and fit.

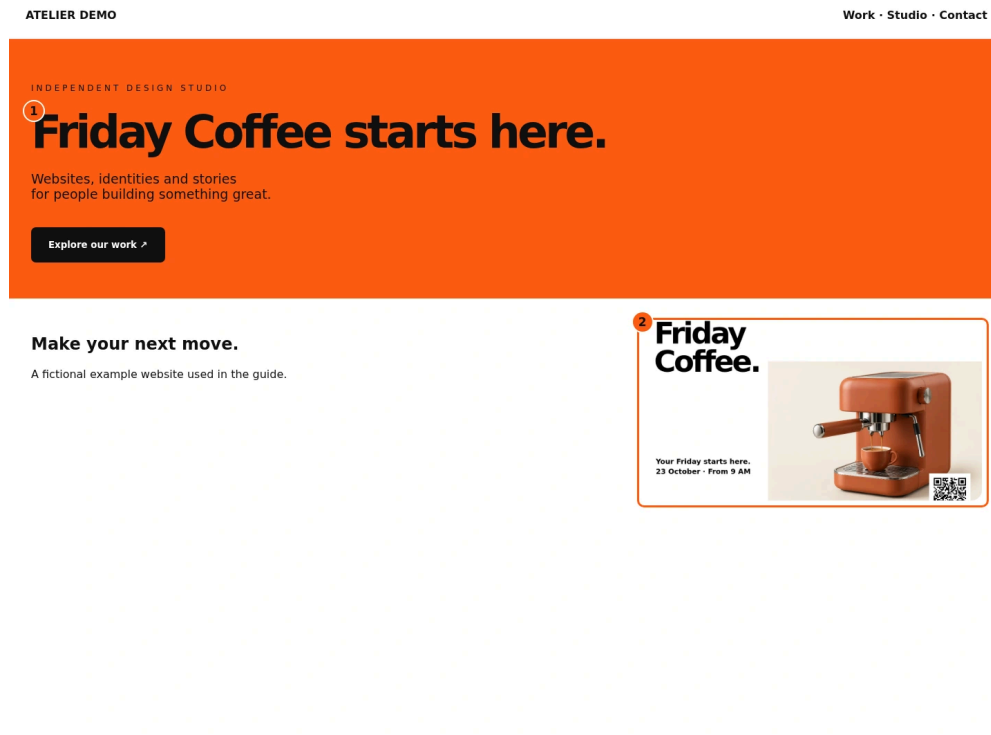

This action has already saved the website on success. It differs from ordinary text and crop edits that need Save website.

If the result needs another change, make a specific correction. Do not click repeatedly while a recreation is still running.

WHAT HAPPENS NEXT

The selected picture and saved page use the replacement result.

Check the public result after editing

Atelier Demo · Example account and simulated responses.

1 The saved headline.

2 The selected image was replaced.

Close the native editor, then choose View website. The saved page opens in another tab.

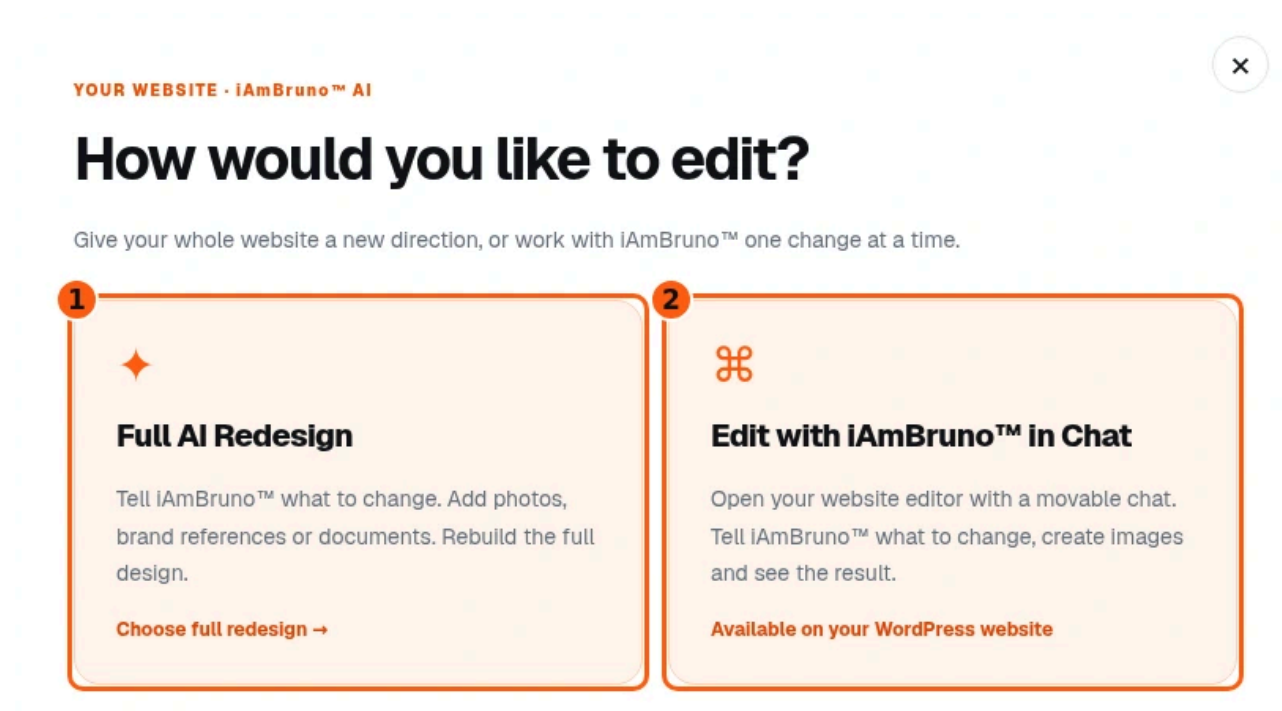

Check the headline, image, links and layout outside the editing tools. Test a phone-sized view for your real site.

This example shows the saved fictional page after our headline correction and illustrative image replacement. No customer site or paid generation was used.

WHAT HAPPENS NEXT

You have checked the actual saved output rather than relying only on a toolbar message.

Choose the right AI editing path

Atelier Demo · Example account and simulated responses.

- 1 Choose full redesign for a complete replacement.
- 2 Chat Design requires a connected WordPress site.

Choose Edit with AI. Full AI Redesign replaces the overall design from completed intake and your new direction.

Edit with iAmBruno in Chat opens the connected WordPress editor for a conversation about particular changes. Follow the WordPress guide for its proposal and approval flow.

For a native preview, Chat Design is disabled until the site is published to WordPress. That is the branch illustrated here; it is not a broken chat button.

WHAT HAPPENS NEXT

You can choose a full redesign or the available WordPress conversation without confusing their approval behavior.

Review the full-redesign request before running it

The screenshot shows a web interface titled 'Full AI Redesign' with a close button (X) in the top right. It contains four numbered steps: 1. A text box with the placeholder 'Using your completed Website Preview Intake · Atelier Demo'. 2. A text box with the prompt 'What would you like to change?' followed by a detailed instruction: 'Rebuild the complete Atelier Demo website around Friday Coffee. Keep vivid orange, black text, current brand and the confirmed event facts: 23 October 9–10:30AM. Write a confident welcome and a clear Come for a coffee action.' 3. A file upload area with an orange arrow icon, the text 'Drop your references here', a subtext 'Photos, logos, brand references and PDFs.', a 'Choose files' button, and a note 'Up to 10 files · 15 MB each · JPG, PNG, WebP or PDF · No SVG'. A file named 'product.webp' with a coffee machine image is shown. 4. A 'Run full redesign' button. A 'Back' button is located at the bottom left. A notice at the bottom states: 'This redesign replaces the full design of this selected website, using your completed Website Preview or Social Media intake and the direction you give here. A blank or broken website can be rebuilt from that intake.'

Atelier Demo · Example account and simulated responses.

- 1 The completed intake that Bruno will use.
- 2 Your whole-site direction.
- 3 Attached reference files.
- 4 Start the full replacement only when ready.

Choose Full AI Redesign. Check the completed intake name, then describe the desired whole-site direction and any facts or elements that must be preserved.

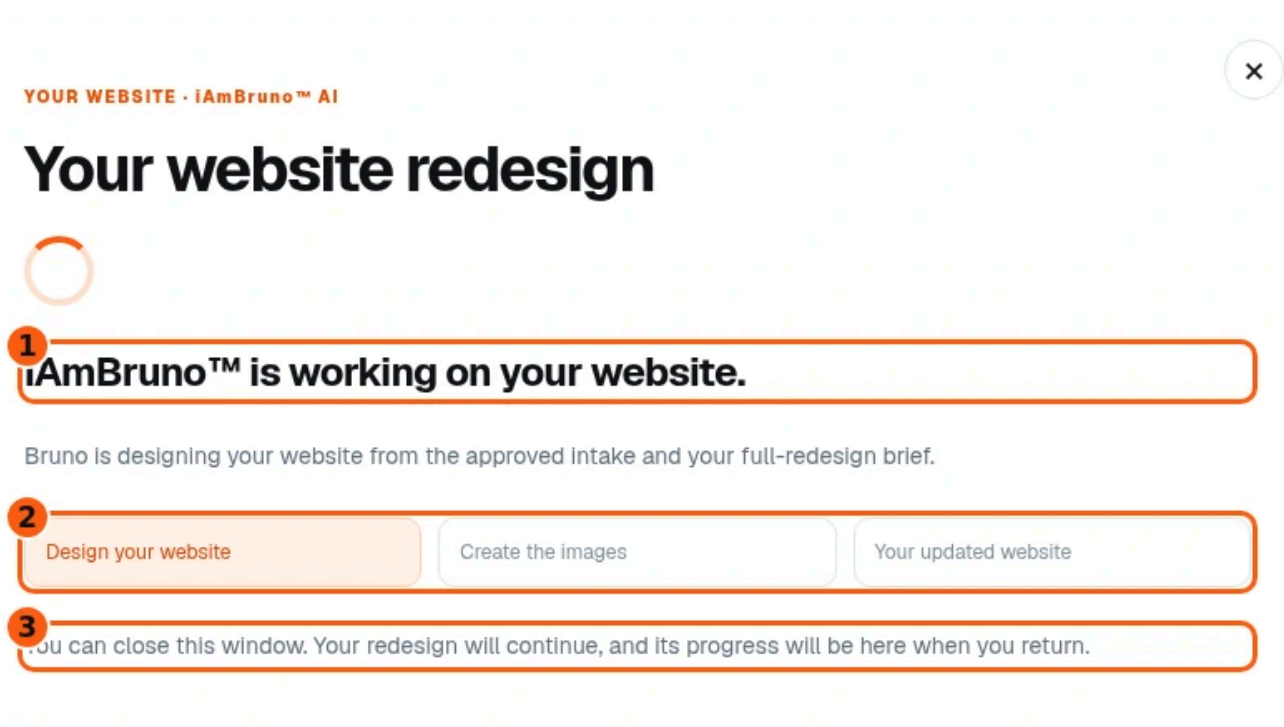

Add useful JPG, PNG, WebP or PDF references. The form accepts up to ten files, with size limits shown in the interface; SVG is not accepted.

Read the replacement notice. Run full redesign starts the production request; there is no separate concept-only approval screen in this branch. Use Chat Design for a conversational proposal about a smaller change.

WHAT HAPPENS NEXT

The request becomes a saved background redesign with visible progress.

Let the saved redesign continue

Atelier Demo · Example account and simulated responses.

- 1 The current progress message.
- 2 The production stages.
- 3 The saved job continues in the background.

The progress view distinguishes designing the website, creating images and the completed website. A running job is not a finished result.

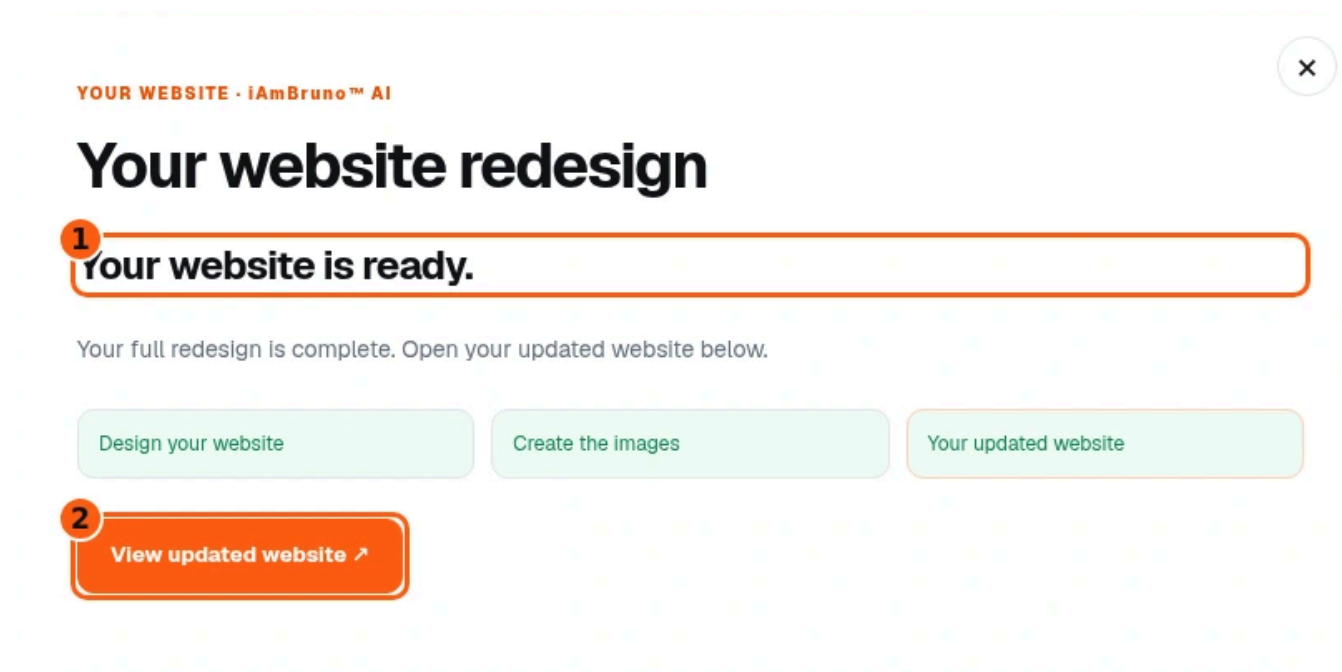

While a redesign is active, close this window and reopen Edit with AI to check progress. After completion it returns to choices: use View website, not another redesign, to inspect the saved result.

Do not submit a duplicate request because progress takes time. If progress cannot refresh, read the message; it does not mean another run was started.

WHAT HAPPENS NEXT

The existing run can complete or report a specific failure without a duplicate submission.

Open the confirmed redesigned site

Atelier Demo · Example account and simulated responses.

1 The explicit completed state.

2 Open the updated website.

Wait for Your website is ready and the View updated website link. The embedded Website preview also refreshes after the successful result.

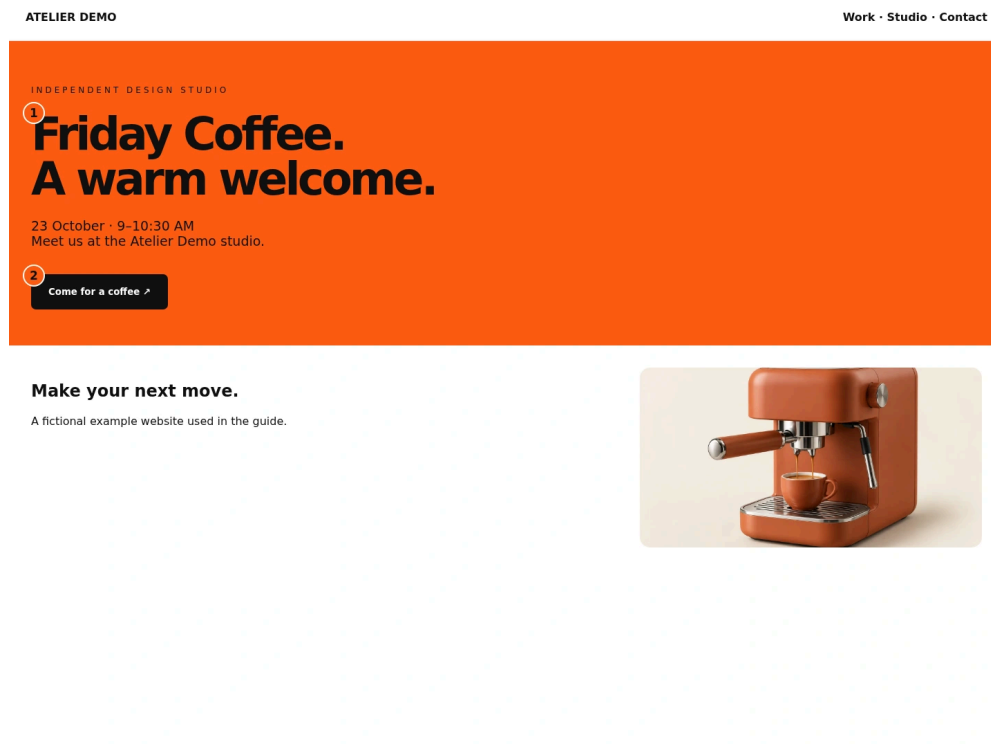

Choose View updated website to inspect it. A queued or running label is not equivalent to this completion state.

If the job needs attention, review the stated error and your brief before starting a new run. Do not assume a failed synchronization changed the live site.

WHAT HAPPENS NEXT

The completed result is ready for your own visual and factual check.

Review the finished full design

Atelier Demo · Example account and simulated responses.

1 The new welcome headline.

2 The requested call to action.

Check the new headline, event details and Come for a coffee action against the full-redesign request. Also inspect the rest of the pages and phone layout on your real site.

Bruno writes and designs from your intake and direction, but your factual review still matters. Correct any inaccurate times, prices, contact details or claims.

The image here is an illustrative fictional result used to teach the interface. It is not evidence of a new paid website build.

WHAT HAPPENS NEXT

You can accept the result or request a precise follow-up through the editing path available for your site.

Complete the intake when redesign is blocked

YOUR WEBSITE · iAmBruno™ AI

Full AI Redesign

A completed Website Preview or Social Media intake is required.

1 Before a full redesign, complete your business intake. iAmBruno™ will use your current information—not the old Companion website intake.

- Complete your business description and goals.

Complete Social Media intake Website Preview intake

What would you like to change?

Rebuild the complete Atelier Demo website around Friday Coffee. Keep vivid orange, black text, current brand and the confirmed event facts: 23 October 9–10:30AM. Write a confident welcome and a clear Come for a coffee action.

Drop your references here

Photos, logos, brand references and PDFs.

Choose files

Up to 10 files · 15 MB each · JPG, PNG, WebP or PDF · No SVG

product.webp

This redesign replaces the full design of this selected website, using your completed Website Preview or Social Media intake and the direction you give here. A blank or broken website can be rebuilt from that intake.

2 Run full redesign

Atelier Demo · Example account and simulated responses.

- 1 The missing-intake explanation and current intake links.
- 2 Production stays disabled until the requirement is satisfied.

A full redesign needs a completed Website Preview or Social Media intake. If one is missing, the form lists what is needed and disables Run full redesign.

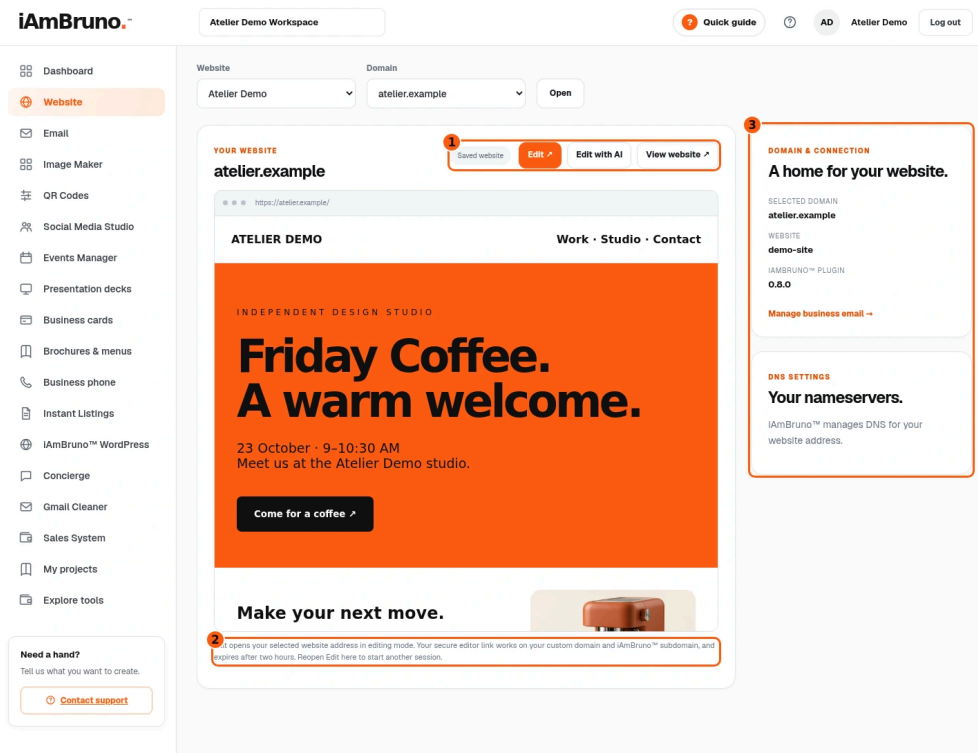

Use the relevant intake link and finish the factual business information there. The old Companion intake does not replace the current intake requirement.

Return to Website afterward and check the named completed intake before submitting your redesign.

WHAT HAPPENS NEXT

The ready intake can supply Bruno with the facts needed for a coherent full design.

Connected WordPress uses a secure edit link

Atelier Demo - Example account and simulated responses.

- 1 The connected site's Edit, AI and View actions.
- 2 The temporary editor-session explanation.
- 3 The selected domain and connection details.

On a connected WordPress site, Edit is a link that opens the selected website address in editing mode. It is different from the native modal shown earlier.

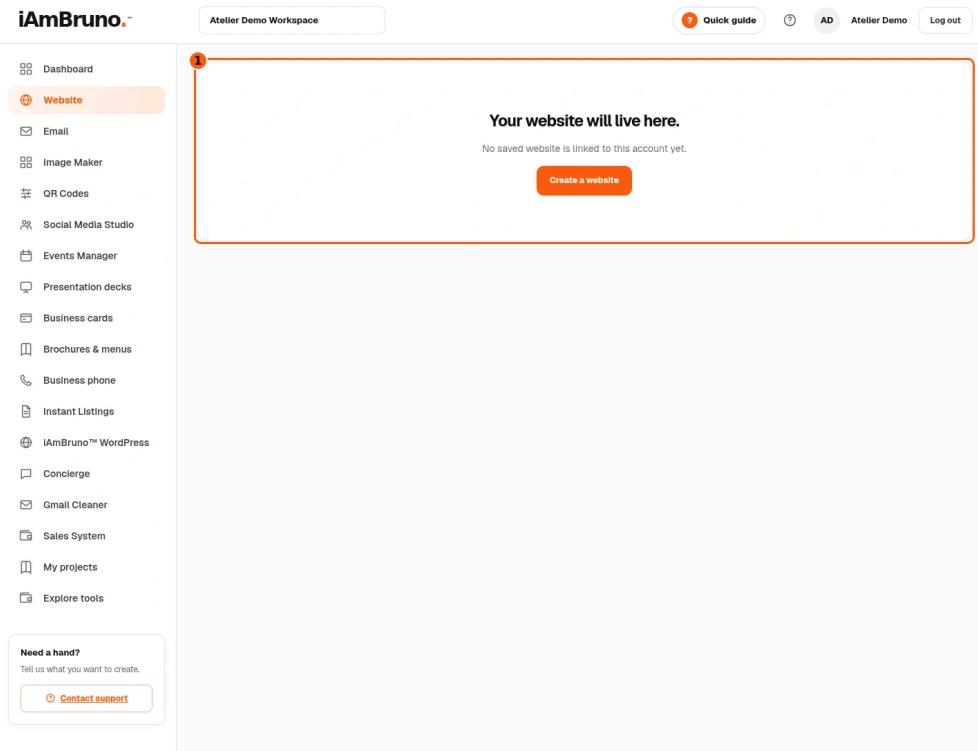

The secure editor session expires after two hours. Reopen Edit from this dashboard to start another session rather than sharing or reusing an expired link.

Edit with AI can also open Chat Design for this site. Follow the WordPress manual for its actual movable conversation, proposal, approval and result.

WHAT HAPPENS NEXT

You can enter the correct WordPress editor while keeping the owner-only session private.

Start from setup when no website is linked

Atelier Demo · Example account and simulated responses.

- 1 The actual empty state and Create a website entry.

Your website will live here means this account has no saved linked website to edit.

Create a website opens Website Preview. Follow that separate guide for the request, multi-page preview and plan/setup choices.

If you expected an existing site, check the signed-in account and contact support. Opening the empty page does not create a website or activate hosting.

WHAT HAPPENS NEXT

Once an eligible saved website is linked, its preview and available edit controls appear here.

Come back whenever you need it.

Use Quick guide for a short reminder of the main controls. Keep this full manual for the complete task and its different choices.

In your dashboard, choose **Quick guide → Show me around** to replay the short tour. Use **Read the guide** or **Download PDF** for these complete instructions.
